

How to measure the area of a circle garden bed.

1. Measure the diameter of the circle area.
2. Multiply the diameter by diameter. (equals a square shape.)
3. Then multiply the total by 0.7854 (this remove the corners and will give a sq total of the circle)
4. Then multiply by depth. (Recommended is 4 inches or 10cm.)

E.g. $4.5 \times 4.5 = 20.25$

$20.25 \times 0.7854 = 15.91$ square meters

$15.91 \times .1 = 1.591$ cubic meters
