

## How to measure the area of a square or rectangular garden bed.

1. Measure two touching sides. E.g. The sides that touch in the corner.
2. Multiply the two sides. (This will give the Sq metre area.)
3. Multiply by depth. (Recommended depth is 4 inches or 10cm.)

E.g. Square:-

$$4.5 \times 4.5 = 20.25 \text{ Squared Metres}$$

$$20.25 \times .1(10\text{cm}) = 2.025 \text{ Cubic Metres}$$

E.g. Rectangle:-

$$4.5 \times 6 = 27 \text{ Squared Metres}$$

$$27 \times .1 = 2.7 \text{ Cubic Metres}$$
